Damper Actuators

SQN9...

Reversible electromotoric actuators for air dampers and valves of oil or gas burners of small to medium capacity.

The SQN9... and this Data Sheet are intended for use by OEMs which integrate the damper actuators in their products!

Use and features

The SQN9... actuators are designed for driving gas or air dampers of oil or gas burners of small to medium capacity, for load-dependent control of the fuel and combustion air volume:

- In connection with P-PI or PID controllers, such as the RWF40...
- Directly via the different types of burner controls, such as LOA..., LMO..., LMG..., LFL...
- In connection with 1- or 2-wire control or 3-position controllers

- Holding torque: 0.8...2.4 Nm
- Running time: 4...24 s
- Direction of rotation:

SQN90...	counterclockwise
SQN91...	clockwise
- SQN9...
 - Fixing holes and cable entries
 - Equivalent to actuators of the same category made by Conectron and Berger

Warning notes

To avoid injury to persons, damage to property or the environment, the following warning notes should be observed!

Do not open, interfere with or modify the actuators!

- All activities (mounting, installation and service work, etc.) must be performed by qualified staff
- Before making wiring changes in the connection area of the actuator, completely isolate the equipment from the mains supply (all-polar disconnection)
- Ensure protection against electric shock hazard by providing adequate protection for the connection terminals and by securing the cover
- Each time work has been carried out (mounting, installation, service work, etc.), check to ensure that wiring is in an orderly state and that parameters are correctly set
- Fall or shock can adversely affect the safety functions. Such actuators must not be put into operation even if they do not exhibit any damage

Mounting notes

- Ensure that the relevant national safety regulations are complied with

Standards and certificates

Disposal notes

The actuator contains electrical and electronic components and must not be disposed of together with household waste.

Local and currently valid legislation must be observed.

Legend

- 1) At 60 Hz, running times are about 20 % shorter
- 2) AC 115 V +10 % / -15 % possible, but in the case of undervoltage, torque is reduced by about 20 %
- 3) AC 230 V +10 % / -15 % possible, but in the case of undervoltage, torque is reduced by about 20 %
- 4) When facing the drive shaft and when control voltage is supplied to end switch I

Function

A synchronous motor drives the drive shaft and the camshaft via a gear train. The camshaft actuates the end and auxiliary switches. Using the associated cam, the switching position of each end and auxiliary switch can be adjusted within the working range. Some of the actuator versions are equipped with electronic modules, which perform auxiliary functions in connection with the end and auxiliary switches, or with external devices, such as controllers.

Camshaft

The camshaft has 2 pointers for indicating the direction of rotation.

The pointers are assigned as follows:

- Double pointer → SQN90...
- Single pointer → SQN91...
